DETAILS

Script Body

Has 137 line(s). Calls functions:

```
Script-Body  
|-- -zplg-prepare-home  
|-- add-zsh-hook  
'-- is-at-least
```

Uses feature(s): *alias, autoload, export, zmodload, zstyle*

Exports (environment): ZPFX

--zplg-reload-and-run

Marks given function (\$3) for autoloading, and executes it triggering the load. \$1 is the fpath dedicated to the function, \$2 are autoload options. This function replaces "autoload -X", because using that on older Zsh versions causes problems with traps.

So basically one creates function stub that calls --zplg-reload-and-run() instead of "autoload -X".

\$1 - FPATH dedicated to function
\$2 - autoload options
\$3 - function name (one that needs autoloading)

Author: Bart Schaefer

Remembers all ice-mods, assigns them to concrete plugin. Ice spec is in general forgotten for second-next command (that's why it's called "ice" - it melts), however they glue to the object (plugin or snippet) mentioned in the next command for later use with e.g. `'zplugin update ...'`

`-- zplugin-autoload.zsh/-zplg-unload
```

Uses feature(s): *eval, source, zle, zpty*

Called by:

```
-zplg-scheduler
```

-zplg-scheduler

Searches for timeout tasks, executes them. There's an array of tasks waiting for execution, this scheduler manages them, detects which ones should be run at current moment, decides to remove (or not) them from the array after execution.

\$1 - if "following", then it is non-first (second and more) invocation of the scheduler; this results in chain of 'sched' invocations that results in repetitive -zplg-scheduler activity

if "burst", then all tasks are marked timeout and executed one by one; this is handy if e.g. a docker image starts up and needs to install all turbo-mode plugins without any hesitation (delay), i.e. "burst" allows to run package installations from script, not from prompt

Has 61 line(s). **Is a precmd hook.** Calls functions:

```
-zplg-scheduler
|-- -zplg-run-task
|   |-- -zplg-load
|   |   |-- -zplg-any-to-user-plugin

|   |   |-- -zplg-load-plugin
|   |   |   |-- -zplg-add-report
|   |   |   |-- -zplg-diff-env
|   |   |   |-- -zplg-diff-functions
|   |   |   |-- -zplg-diff-options
|   |   |   |-- -zplg-diff-parameter
|   |   |   |-- -zplg-find-other-matches
|   |   |   |-- -zplg-shadow-off
|   |   |   |-- -zplg-shadow-on
|   |   |-- -zplg-pack-ice
|   |   |-- -zplg-register-plugin
|   |   |-- zplugin-install.zsh/-zplg-setup-plugin-dir
|   |-- -zplg-load-snippet
|   |   |-- -zplg-deploy-message
|   |   |-- -zplg-pack-ice
|   |   |-- zplugin-install.zsh/-zplg-download-snippet
|   |-- zplugin-autoload.zsh/-zplg-unload
|-- add-zsh-hook
```

Uses feature(s): *sched*, *zle*

Not called by script or any function (may be e.g. a hook, a Zle widget, etc.).

-zplg-service

Handles given service, i.e. obtains lock, runs it, or waits if no lock

\$1 - type "p" or "s" (plugin or snippet)
\$2 - mode - for plugin (light or load)
\$3 - id - URL or plugin ID or alias name (from id-as'')

Has 30 line(s). Calls functions:

```
-zplg-service
|-- -zplg-load
|   |-- -zplg-any-to-user-plugin
|   |-- -zplg-deploy-message
|   |-- -zplg-load-plugin

|   |   |-- -zplg-diff-options
|   |   |-- -zplg-diff-parameter
|   |   |-- -zplg-find-other-matches
|   |   |-- -zplg-shadow-off
|   |   `-- -zplg-shadow-on

`-- -zplg-load-snippet
    |-- -zplg-deploy-message
    |-- -zplg-pack-ice
    `-- zplugin-install.zsh/-zplg-download-snippet
```

Has 25 line(s). Doesn't call other functions.

Called by:

```
-zplg-debug-start  
-zplg-load-plugin
```

-zplg-submit-turbo

If 'zplugin load', 'zplugin light' or 'zplugin snippet' will be preceded with 'wait', 'load', 'unload' or 'on-update-of'/'subscribe' ice-mods then the plugin or snippet is to be loaded in turbo-mode, and this function adds it to internal data structures, so that -zplg-scheduler can run (load, unload) this as a task.

Has 14 line(s). Doesn't call other functions.

Called by:

```
zplugin
```

-zplg-unregister-plugin
